Theodoros Mavrommatis' research activities are focused on the study of climate interactions with agricultural crops using crop simulation models, statistical relationships, and drought indicators. Climate data derived from observations or gridded datasets for historical and future climate conditions are used for this reason. He received his PhD in 1997 from the Climatic Research Unit of the University of East Anglia (Great Britain). From 1997 to 1998 was postdoctoral research fellow in the National Center for Atmospheric Research (NCAR) in Boulder, Colorado (U.S.A) and from 1998 to 2001 postdoctoral associate in the Agricultural and Biological Engineering Department in the University of Florida in Gainesville (U.S.A.). Since 2004, he has been part of the staff, currently at the rank of Professor, in the department of Meteorology - Climatology in the School of Geology in the Aristotle University of Thessaloniki in Greece. More details are presented in the full CV.
